

SonoBond™ Packaging Adhesives

**Engineering solutions to
specific bonding challenges**

A 60-year legacy of custom adhesive formulations

Whether you're producing tubes and cores, corner and edge protectors, boxes or folding cartons, you need more than off-the-shelf adhesives. Companies like yours benefit from developing strong bonds with paper and packaging experts—people who first study your applications then engineer an adhesive solution that will work better and more consistently for you and your customers.

With over a century of R&D experience adhering paper fibers, Sonoco partners with some of the world's leading brands to provide superior quality bonding solutions. Our experience offers you ready access to productivity gains and many other benefits. You also get a single-source paper and adhesives supplier to help you solve problems today and succeed tomorrow.

Tubes, cores and composite cans

Our first-hand knowledge of tube and core manufacturing

includes more than a century of winding experience. Such unmatched expertise has helped us develop a wide variety of liquid polymer-based adhesives, as well as custom formulations to meet individual customer process needs.

Edge and corner protection

Though similar to tube and core production, making edge and corner protection offers challenges of its own. Sonoco offers both dry blends and liquid-based adhesives with a cost-effective approach to match performance with your price and budget considerations.

Other applications

Because every box- and carton-making process can have variables that affect your production, we always consider those factors when formulating a bonding solution.

GLUE LAP, or MANUFACTURERS' JOINT

applications present challenges for viscosity, wet tack, set speed and difficult substrates.

CASE and CARTON SEAL

glues are process-tailored which encompasses a wide variety of factors that can influence the bond's effectiveness.

LABEL and LITHO LAMINATING

often require a specific formulation of liquid polymer-based adhesive to match your substrate and production objectives. Our new dextrin/polymer hybrid may be an attractive and economical answer for your line.

Applications

- Tubes and cores
- Composite cans
- Reels
- Laminating
- Air filtration
- Kraft bags
- Angleboard
- Case and carton sealing
- Labeling
- Header/ream/roll wrap
- Box manufacturing—joint and glue lap
- Point-of-purchase displays
- Protective packaging
- Blister cards
- Product assembly
- ...and many more.

Providing long lasting, productivity enhancing solutions

Instead of working to get the attention of a volume-driven adhesives vendor, you gain quick access to Sonoco technology, such as machinery and paper manufacturing, paper converting and packaging development and testing. Such depth and breadth of expertise results in total cost reductions, peace-of-mind and the insights of a company dedicated to creating higher-performing adhesives.

Learn what it's like to find an adhesives supplier you'll want to stick with for the long term. Please get in touch and start creating some strong bonds with Sonoco.
